

## If it can't take the pressure, it can't be a Copeland.

Only compressors that can withstand the U.L. required "burst test" are worthy of the Copeland name. The "burst test" is only one of the many U.L. requirements that our compressors pass to qualify as a U.L. recognized product. U.L. recognition ensures you that the Certified Copeland compressor meets all regulatory approvals.

**Use of non-approved compressors may void insurance coverage.**

Give Copeland your toughest test.

We're built to take it.

Certified Copeland compressors are only available at Copeland Primesource Wholesalers.
